

# CONVERTER USB ETHERNET ASSEMBLY

The CUE (USB to Ethernet+Power Converter Box) allows simultaneous ethernet communication and charging capabilities for up to 3 individual Nett Warrior End User Devices.

The CUE can be mounted utilizing 3 specific mounting options:

**MH-47 Specific**

**DZUS Rail Adapters**

**Mounting Ear Adapters**

All Configs: Total Weight < 1.0 lb

## COMMUNICATIONS MATTER

The CUE natively handles ethernet switching as well as USB to Ethernet conversion across all three ports. With input power between 6Vdc and 36Vdc, each port is capable of allowing a single Nett Warrior device to charge at 5Vdc, up to the maximum of 2.1 Amps per port.\*

The CUE features a dedicated HI-LO toggle switch per port, coupled to two variable resistors set to pre-determined resistance values, enabling for quick impedance selection.

\* Requires Power input and at least one Ethernet over USB capable device to function.
